All seeds are shipped as quickly as possible after the order is received. We always aim to send all the seeds at one time but it sometimes happens that a certain sort of seed is not in stock, and not wishing to delay the whole order on that account we ship the seeds and let that sort follow soon as in. Plants are booked and shipped in proper season; we ship no plants during cold weather on account of danger from freezing. Tender bulbs are shipped in the spring. Fall bulbs are booked and shipped from September to December 1.

SEEDS GIVEN AWAY OR EXTRAS

WHAT WE WARRANT

We believe that the seeds we offer are excelled by none in the world, yet our practical experience of many years fully assures us of the fact that crops may fail no matter how fresh and pure the seeds sown to produce them may be. Pe-Tsai, Chinese or "Celery" Cabbage

Chinese or Celery Cabbage has attained great popularity in the last two years. One grower writes: "This fall there was a vegetable called Celery Cabbage sold a vegetable called Celery Cabbage sold on our market and people went crazy over it." Pe-Tsai produces beautifully crisp, celery-like heads that blanch easily and that resemble a giant Cos Lettuce. As a salad it rivals the finest lettuce, while cooked like cabbage or spinach it makes a delightful "greens." Early sowing is not recommended, as during hot weather it has a tendency to run to seed without heading. Sow seed, in any good soil, the first of August, making rows 24 to 36 inches apart and thinning to 15 inches apart in the row. Pe-Tsai will not stand frost. Pkt. 6c, oz. 25c, ½ lb. 75c.

Ears are borne uniformly at about four feet from the ground, high enough to get the sun and air, low enough to be protected from windstorms. The ears are large, 10 to 12 inches long, nearly cylindrical, holding their size well to the end, are well rounded or capped over at both ends and have that well groomed appearance of thoroughbred corn. The fine shaped grains, which are set in straight rows, are quite deep and broad at the germ end, thus making a solid or heavy ear, and they are of such rich yellow color and uni-form size that it is surely the handsomest corn we have ever seen. New Coffee Berry

Sudan Grass. It was first introduced into the United States in 1909 from Sudan under the name of Garawi. Tests were made in all parts of the United States. As a result of the tests the Department of Agriculture reports that Sudan Grass will be of the greatest value in the western and southwestern states where the rainfall is deficient. The Department also reports that it will make just as good yields in most of the central and northern states, and will grow nearly everywhere. Sudan Grass is strictly an annual and dies each year like Millet. It belongs to the sorghum family. Is best sown broadeast or with a drill when it can be cut with a mower and treated like any other hay. It grows three to five feet high. Produces twice as much hay per acre as any of the common forage plants. Sow about corn planting time, after the ground becomes warm. 10 to 15 lbs. will seed an acre. From Central United States southward it is possible to have from 2 to 3 cuttings. From seeding to cutting 75 to 80 days are required. The second cutting comes on in about 45 days. The yields vary from 1 to 8 tons cured hay per acre. Sudan grass, lb. 40c, prepaid. Not prepaid, 5 lb. \$1.10, 10 lb. \$2.00, 25 lb. \$4.70, 50 lb. \$9.25, 100 lb. \$18.00.

Feterita. A new non-saccharine sorghum, maturing its crop 20 to 30 days earlier than Kaffir Corn, making it well adapted to sections with short seasons. Feterita grows about 5 feet high, branching freely from the roots and producing numerous large heads of white grain. It is a remarkable drought resister, producing a crop when all other kinds of fodder fail. The grain is excellent for feeding chickens or any stock. The fodder is much finer than corn stalks, and is highly relished by all stock. For grain sow 5 pounds of seed per acre in hills, or drills. For fodder, sow one-half bushel per acre, broadcast or in rows. Per lb. 30c, prepaid; not prepaid, 5 lb. 60c, 10 lb. \$1.00, 25 lb. \$2.00, 50 lb. \$3.75.

Sweet Clover Bokhara (White). For years considered valuable only for the excellent honey which it yielded, its importance as a soil builder and inoculator for Alfalfa, as a hay crop and as a pasture plant, and its adaptability to generally unfavorable soils and conditions not then being recognized. Now, however, large acreages in some sections are devoted to this crop, and its true value is better known. Stock do not take to it readily at first, but soon learn to like it and eat it greedily. Sow 20 lbs. per acre. Per lb. 40c, ¼ bu, \$2.25, bu, \$8.50.

Alfalfa, or Lucerne. Alfalfa is being more generally grown as experience is teaching our farmers the proper methods to follow. Different soils do not now seem so difficult to overcome, especially when drained, pulverized, sweetened and inoculated. Alfalfa naturally prefers a deep sandy or gravelly sub-soil. Roots from 3 to 15 feet deep and a good stand on properly selected land should yield from 3 to 5 cuttings a year. We make a specialty of extra high-grade seed that tests 99 per cent pure or better. Treat your land to a liberal dressing of fine ground lime or more liberally to fine ground limestone well worked into the soil some three months to a year before seeding to alfalfa. Sow from 10 to 15 lbs. well inoculated seed per aere, using Nitragin. From April 1st to June 15th for the early Spring sowing, either drilled or sown broadcast. If broadcast, cover lightly with a light drag or with single stroke of a harrow. Many prefer sowing from July 15th to September 15th. when seeded late it gives the grower an opportunity to have his land clean and free from weeds. Lb. 40c, 1/4 bu. \$4.00, bu. \$15.00.

Most Valuable New Grass Introduced in the Last Twenty-five Years.

Bromus adapts itself to nearly all conditions of soil and climate and yields enormous quantities of hay and makes abundant pasture. Defies drought and is not affected by frost. A decided success. It forms a very thick, dense sod and is a permanent grass not killed out by variations of weather. Easily destroyed when desired by plowing, however. Universally recommended by the Experiment Stations of the northwestern states and by the U. S. Dept. of Agriculture. Prof. Shepard, of North Dakota Agricultural College says: The eagerness with which it is sought by stock leads me to believe that it is of as much value as timothy for pasturage, and that the hay is as valuable, ton for ton. Sow early in the spring, 20 pounds per acre alone or 15 pounds if sown with alfalfa. Price, postpaid, lb. 40c, at buyer's expense, 10 lbs. \$2.25, 25 lbs. \$5.25, 50 lbs. \$10.00.

Golden Millet. This is very profitable for farmers to grow for fodder. ½ bu. \$5c, ½ bu. \$1.60, bu. \$3.00.

Japanese Millet, or "Billion Dollar Grass," as it is sometimes called, is of recent introduction, and great claims are made for it as to productiveness and value as a forage plant. Its introducers say of it that it is a marvelous grower and luxuriant stooler, and Prof. Brooks, of the Massachusetts Experiment Station is quoted as saying: At our station it produced 60 bushels of seed, 11,297 pounds of straw, 36,000 pounds of hay per acre, being superior to good corn fodder in feeding for milk, and in combination with the soja bean makes a very superior ensilage. Recommended highly for feeding dairy cattle, young stock and sheep, being very rich in nutritious elements. If sown latter part of April will be ready to cut for hay by middle of July. Attains a height of from 5 to 7 ½ feet, according to season. Nct prepaid, ½ bu. 45c, ½ bu. 75c, ½ bu \$1.35, bu. (36 lbs.) \$2.50.

Superb (Per). This variety is by far the best of any of the fall bearing strawberries. In growers' opinions there has never been a variety introduced, either spring or fall bearing that has as much vitality and fruit producing qualities as the Superb. It seems alsonst unbelievable that, after producing a crop of fruit the first fall after being planted, they will also bear as large a crop the following spring as any of the spring sorts; still such is absolutely the fact, and, besides, they will produce another good crop the following fall; however, this variety does its very best when grown in hills and runners kept cut. The fruit of Superb is large, dark red, glossy, firm, and of extra good quality. The plants are healthy growers and make runners freely. Per doz. 50c, 100 \$3.00, postpaid.
